

Distribution of errors

```
## [1] "95% of values fall between -0.027 and 0.029"
```

E observed vs R at different error levels

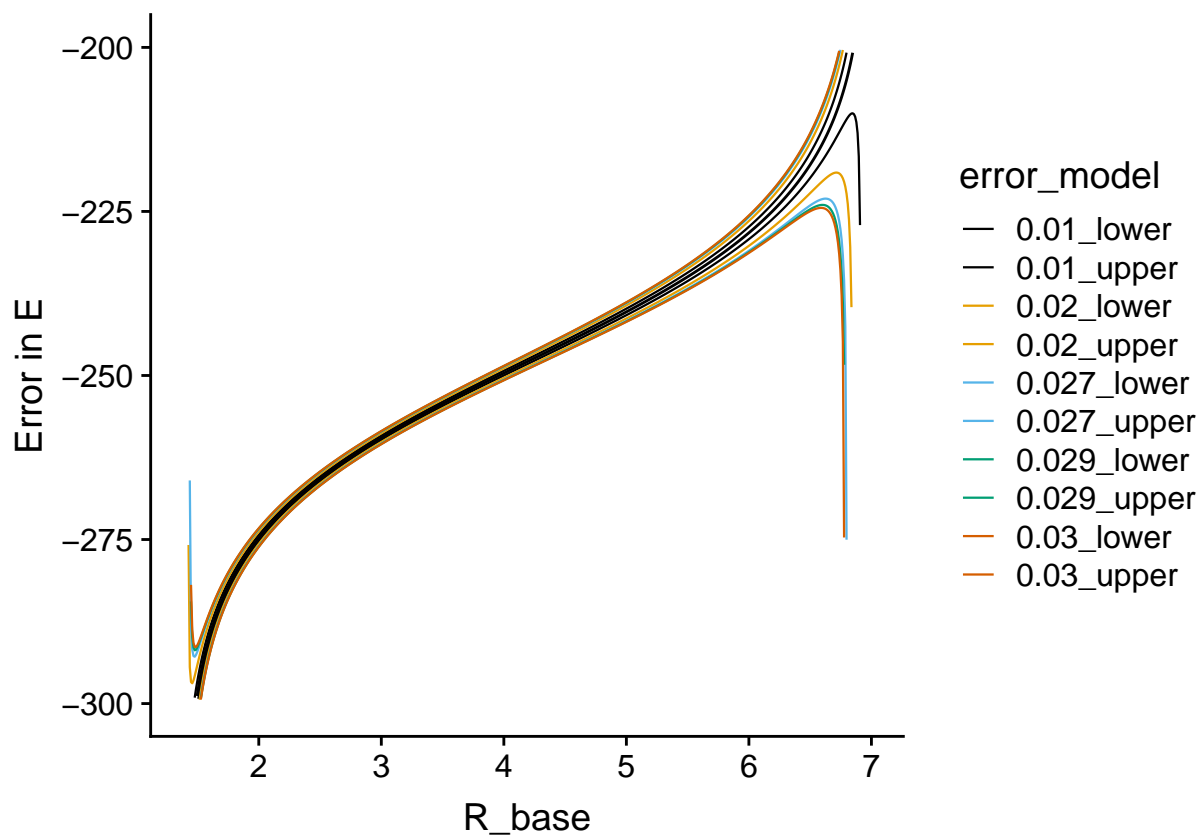

Phase plot (for absolute error of 0.03)

Sanity check: using percent errors

Note: All of the previous graphs were using **absolute** errors. Those looked small, so here are all the exact same graphs, but just with **relative/ percent** errors instead.

Phase plot (for relative error of $R \cdot 0.03$)
