

Delta profiles

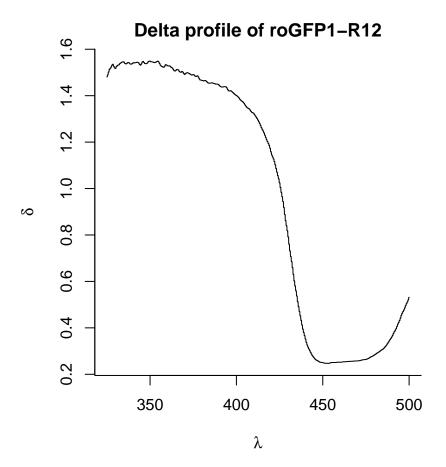

Table 1: Approximate delta-wavelength values for GFP1-R12

Characteristic	GFP1-R12
Delta ~ 1 Delta minimized	425.3 453.3
Delta maximized	354.3

Choose two sets of wavelengths for each sensor.

For GFP1-R12:

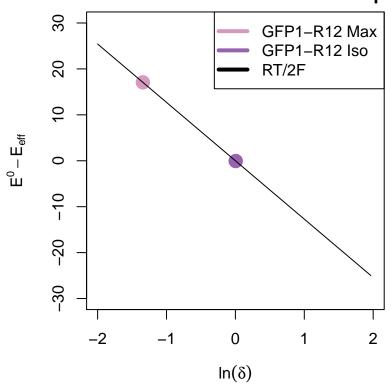

• Use $\frac{410+/-5nm}{425+/-5nm}$ for isobestic • Use $\frac{410+/-5nm}{470+/-5nm}$ for maximum total dynamic range

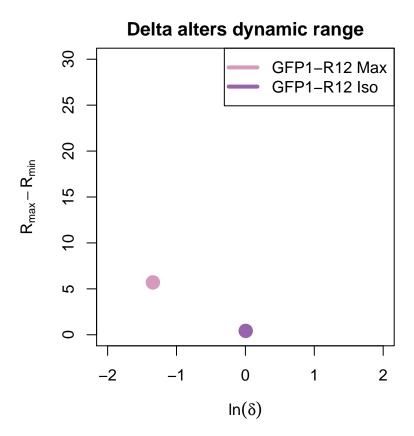

Table 2: Characteristics of GFP1-R12sensors

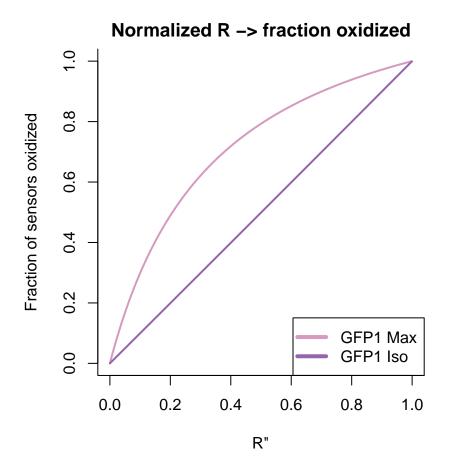

Characteristic	GFP1 Isobestic	GFP1 Max
Delta	1.0	0.3
Rmin	1.4	1.4
Rmax	1.8	7.1

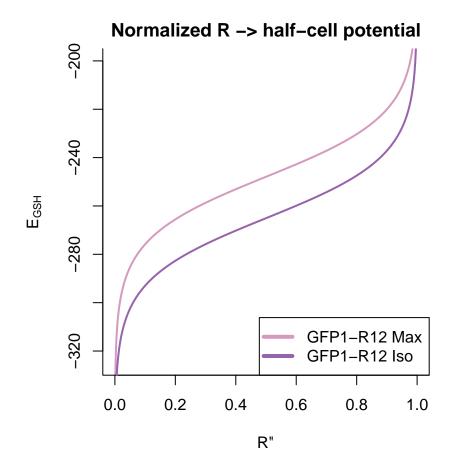

Characteristic	GFP1 Isobestic	GFP1 Max
E0	-265.0	-265.0
Adjusted E0	-265.1	-247.9
Rmax-Rmin	0.4	5.7
Rmax/Rmin	1.3	5.0

Delta determines deviation from midpoint

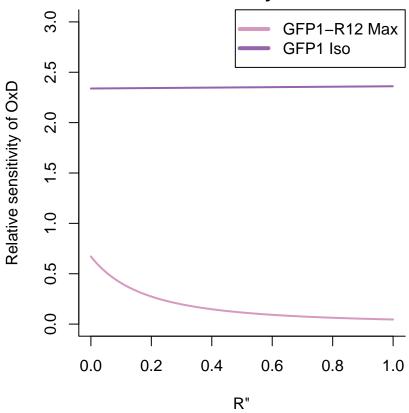

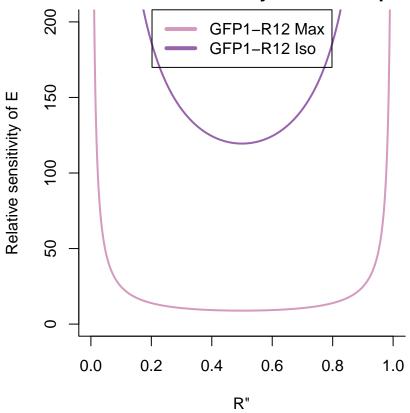

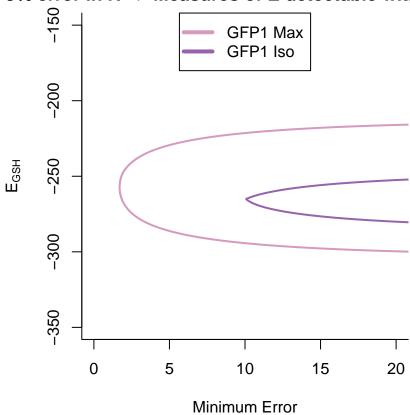

Normalized R -> sensitivity of fraction oxidized

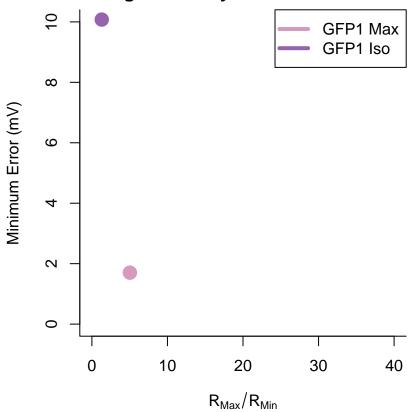

Normalized R -> sensitivity of half-cell potential

5% error in R -> Measures of E detectable within error

Fold-change inversely related to minimum error

Relationship between delta and minimum error?
